TWO-STEP PROBLEM

WHAT IT MEANS:

A word problem that needs **TWO** math steps to solve

Step 1: $14 - 3 = 11$
(first event)

Step 2: $11 - 5 = 6$
(second event)

TWO steps to solve ■

📌 A two-step problem has things that happen in the story.
A two-step problem has **2** things that happen in the story.

STEP 1

WHAT IT MEANS:

The **FIRST** thing that happens Solve this equation first!

$$14 - 3 = 11$$

← STEP 1 (first event)

Solve Step 1 first ■

📌 In Laila's problem, Step 1 is: $14 - 3 = \underline{\quad}$.
In Laila's problem, Step 1 is: $14 - 3 = 11$.

STEP 2

WHAT IT MEANS:

The **SECOND** thing that happens Start with Step 1's ANSWER!

↑ from Step 1!

$$11 - 5 = 6$$

Step 2 uses Step 1 answer ■

📌 Step 2 starts with 's answer (NOT the original number!)
Step 2 starts with **STEP 1'S** answer (NOT the original number!)

Two-Step Word Problems • Page 2 of 2 • EXAMPLE KEY — Words 4–6

Name: _____ Date: _____ Vocab Book p. _____

USES / SPENDS

WHAT IT MEANS:

Signal words that mean **SUBTRACT** — take away from the total

"uses 3" = -3

"spends 5" = -5

uses/spends = **SUBTRACT** ■

📌 When the problem says 'uses 3', I 3.
When the problem says 'uses 3', I **SUBTRACT 3**.

SHOW YOUR WORK

WHAT IT MEANS:

Write **BOTH** equations clearly so the teacher can see each step

Step 1: $14 - 3 = 11$

Step 2: $11 - 5 = 6$

Show **BOTH** equations ■

📌 For two steps I write equations total.
For two steps I write **2** equations total.

FINAL ANSWER

WHAT IT MEANS:

The result after **ALL** steps are completed — the last number

$14 - 3 = 11 \rightarrow 11 - 5 = 6$
6 stamps ■

Final answer = **6 stamps** ■

📌 After Step 1 and Step 2, the final answer is stamps.
After Step 1 and Step 2, the final answer is **6 stamps**.
